Naming convention: Intersections are named by concatenating the names of the 2 taxiways that intersect at that point, in alphabetical order. If there are more than 2 taxiways intersecting there, choose 2 "major" taxiways to use to name the intersection. Nodes at runways are named by appending "_[runway number]" to the name of the taxiway which intersects the runway, with runway number chosen as the number of the closest end of the runway to that taxiway. Nodes at hangars/parking areas are the taxiway name plus a unique suffix.
